1
Set the speed and motors for movement
To accomplish the task, the program must work according to the following algorithm:
Repeat
1
Does the sensor detect purple?
5
Turn left
2
Does the sensor detect blue?
6
Turn right
3
Is the sensor detecting green?
7
Move to the charging station
4
Does the sensor detect red?
8
Stay with a passenger
9
Move forward

he program might look like this:

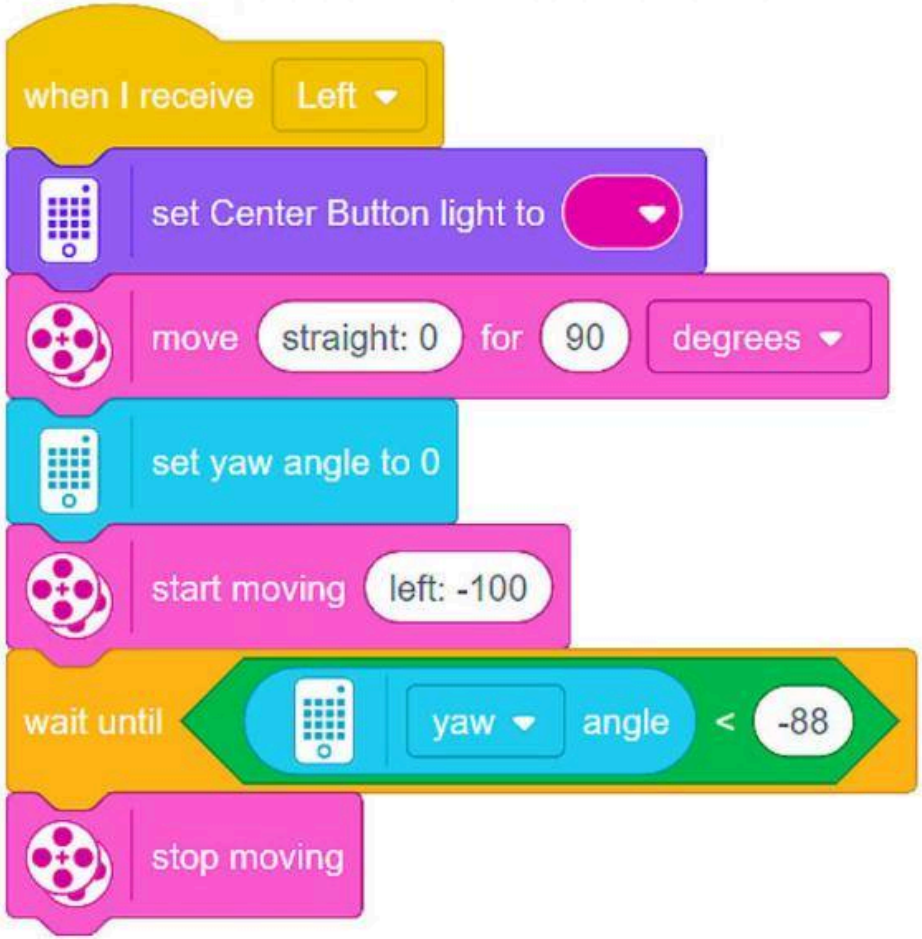

In this step, create messages with names corresponding to the actions of the robot.

The task execution algorithm can be as follows:

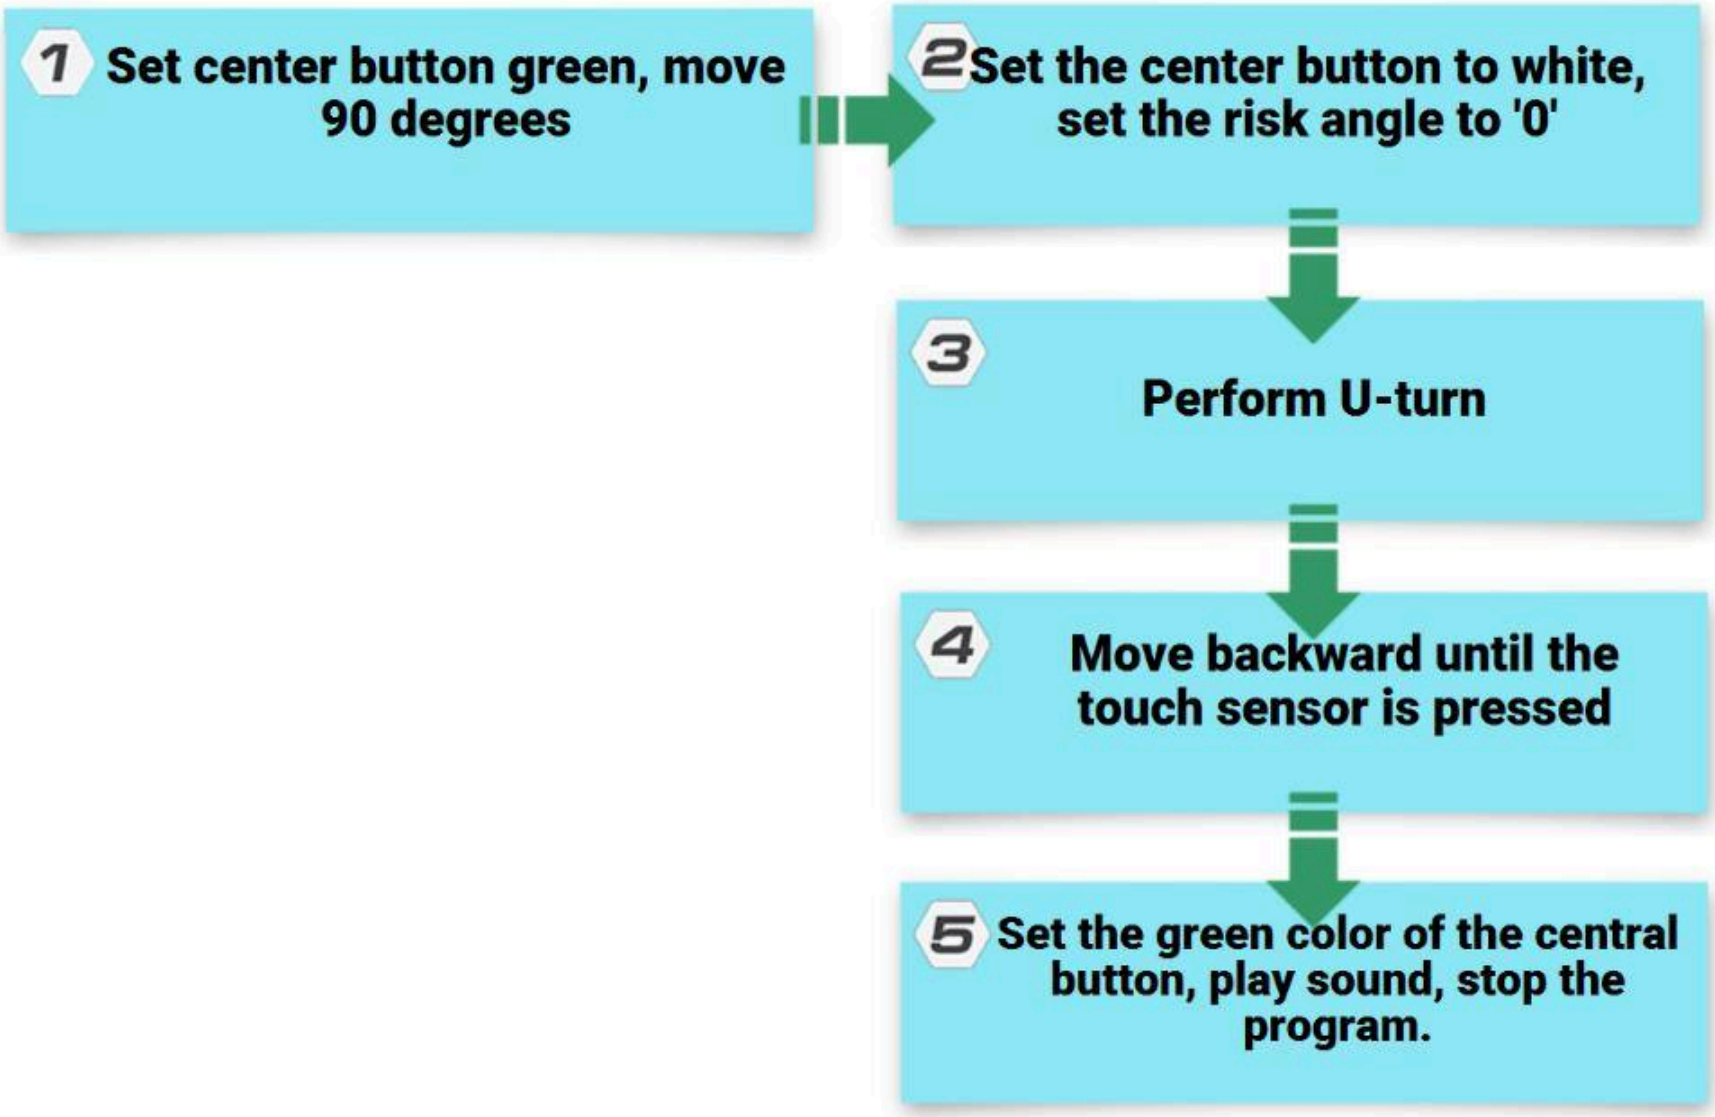

The program for this algorithm looks like this:

Depending on the speed of turn, a different value for the risk angle may be required. At a higher speed, the robot by inertia returns to a larger angle.

To accomplish the task, the program can work according to the following algorithm:

The program might look like this:
