define Up
A
start motor at
-50
% power
wait
2
seconds
A
stop motor

when program starts
Up

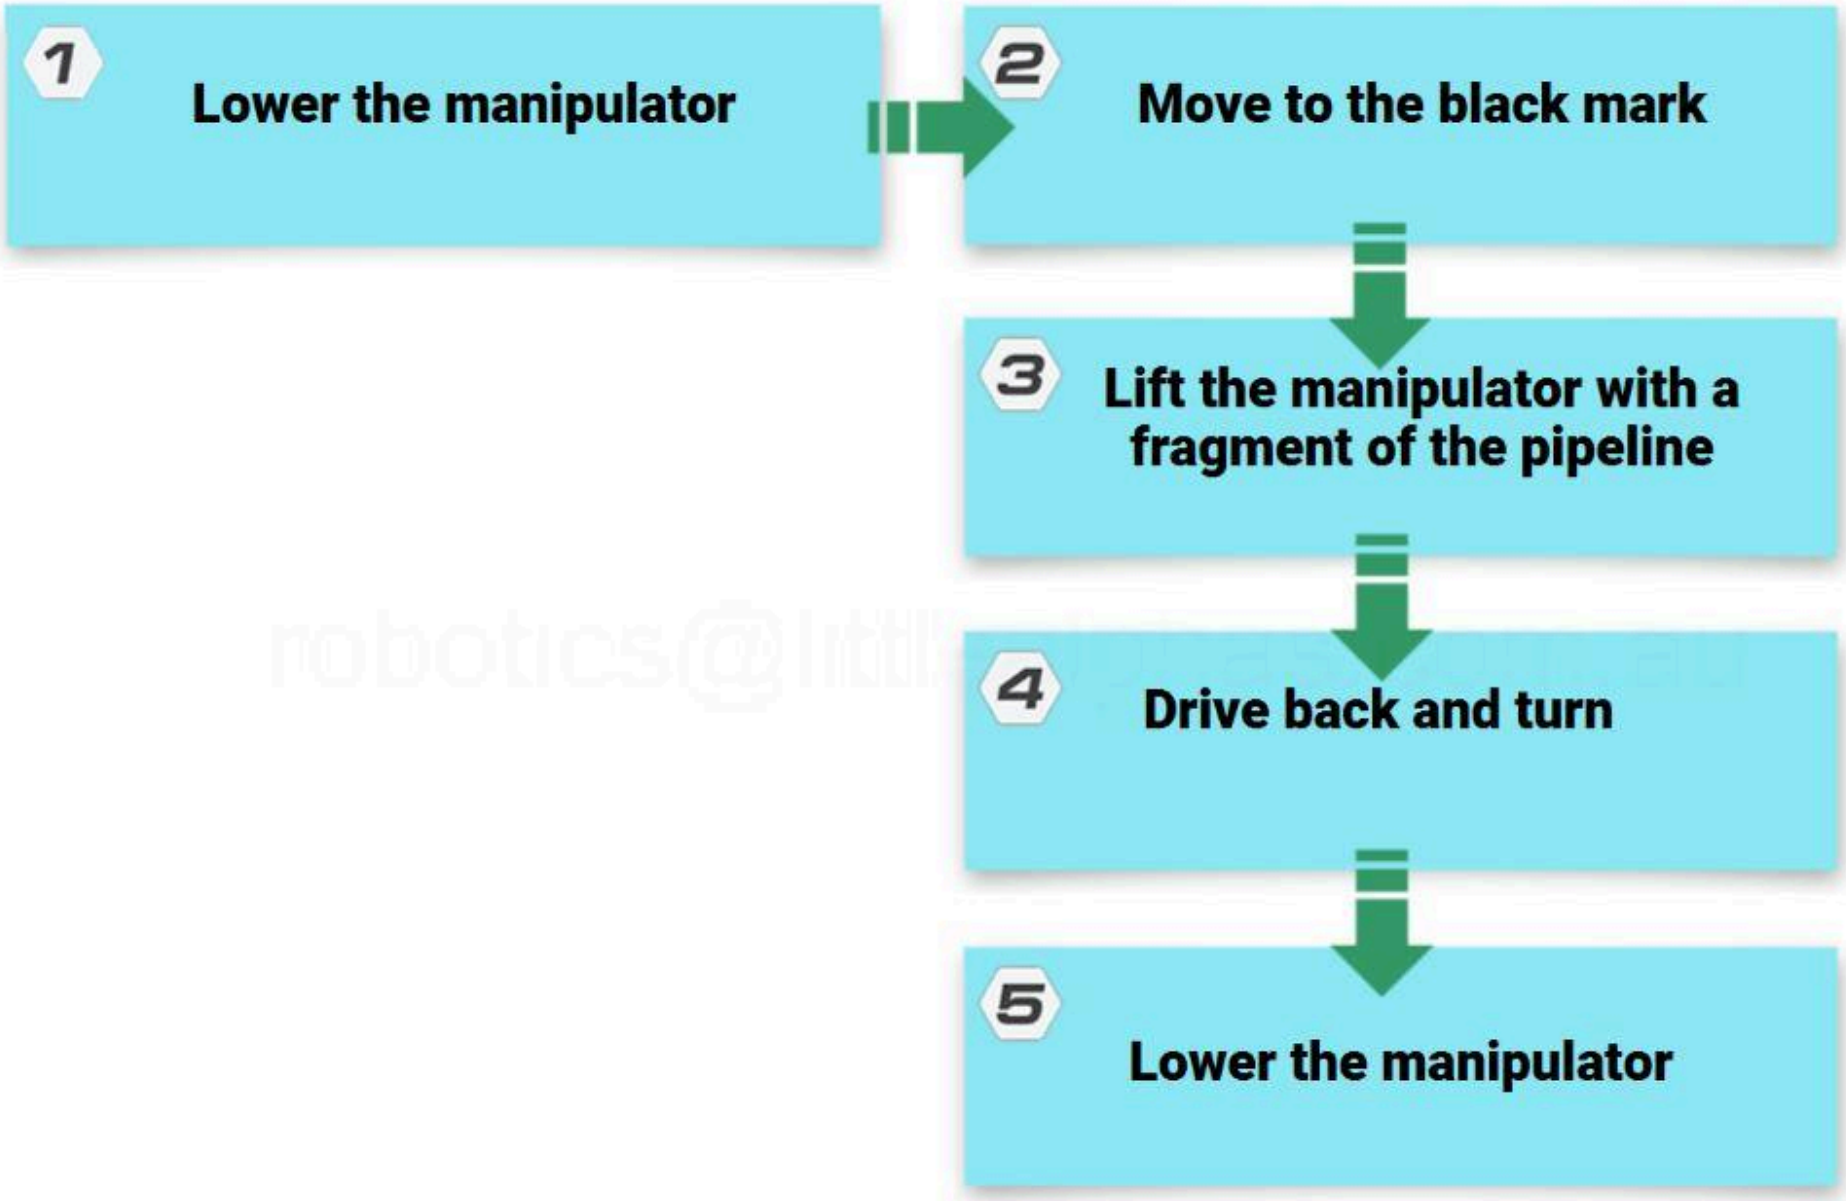

The task execution algorithm can be as follows:

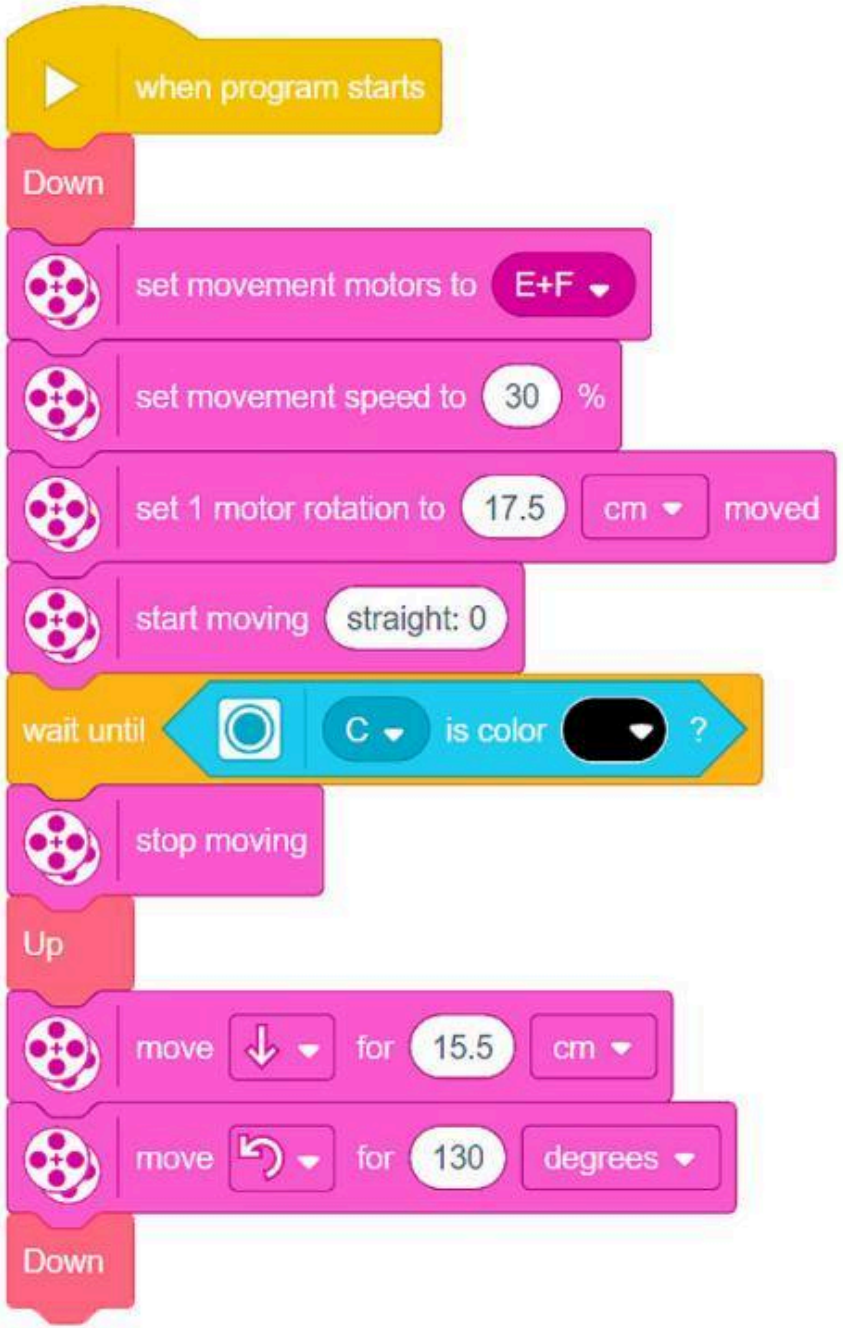

The program for this algorithm looks like this:

The algorithm will change as follows:

The program for this algorithm looks like this:

The next step is to capture a new piece of pipeline and install it in place of the damaged one. Start testing this part of the program from the same place where the robot stopped after completing the previous task

Add the program as follows (only the new part of the program and blocks for adjusting the operation of motors for movement are shown):
