Model by Ignat Khlie

when program starts
Task 6
set movement motors to F+B
set Center Button light to
set sensor orientation to left side
set yaw angle to 0
start moving right: 50 at 30 % speed
wait until yaw angle > 30
wait until is yaw angle in between 0 and 20 ?
stop moving
set Center Button light to

1
Set motors for movement, turn on red
2
Adjust the gyroscope orientation and set the angle of risk
3
Expect a full turn
4
Stop robot, turn on yellow

when I receive SetCamera
if is Distance in between 0 and 10 ? then
set Center Button light to
E go shortest path to position 350
else
if is Distance in between 11 and 20 ? then
set Center Button light to
E go shortest path to position 340
else
set Center Button light to
E go shortest path to position 330

The program algorithm can be represented as follows:
