Algorithm

The algorithm for moving to cell '1' can be represented as follows:

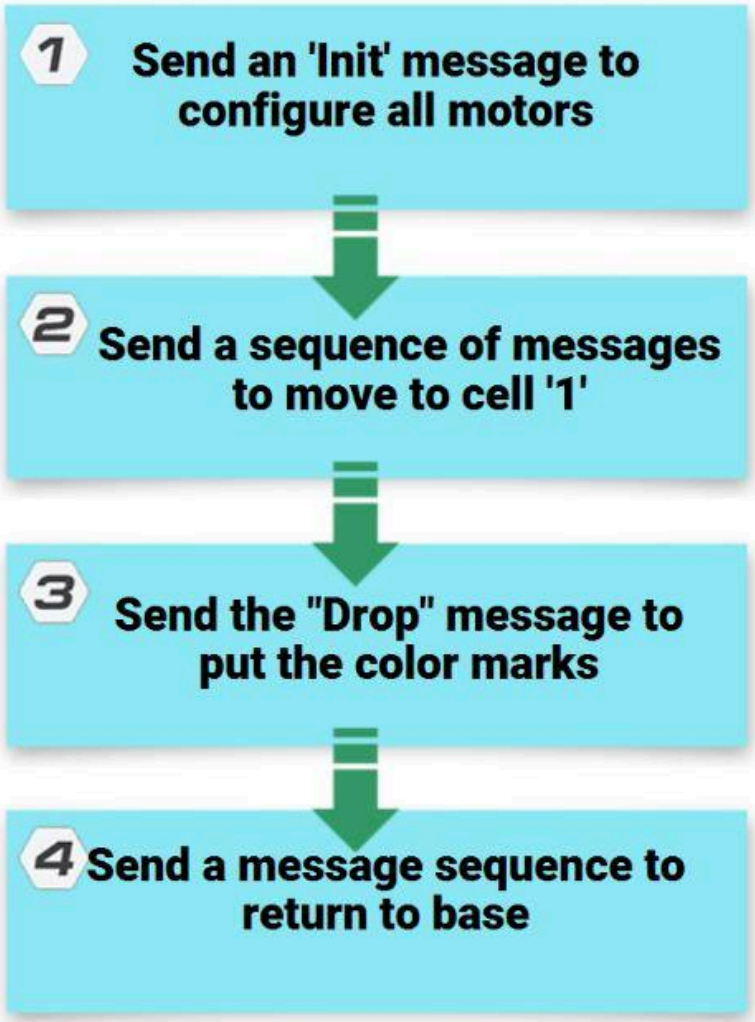

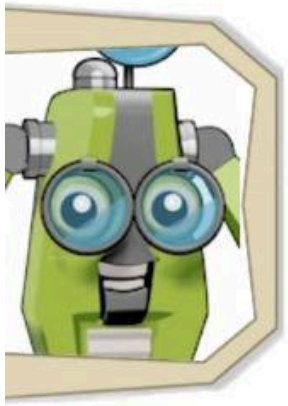

ics@littlealphas.com.au

[redacted]

To accomplish the task, the program must work according to the following algorithm:

Write the following program and upload it to Smarthab at number 1

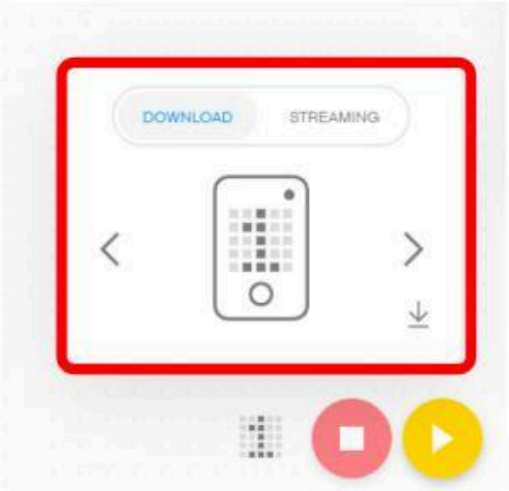

alphas.com.au

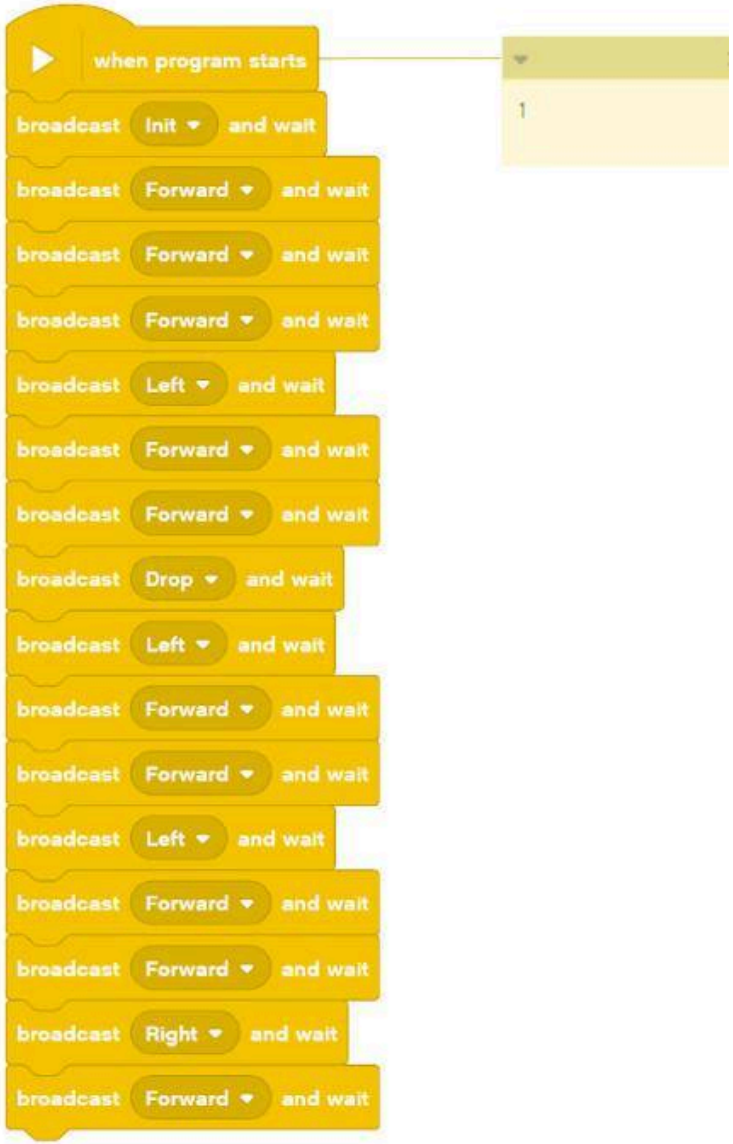

Use comments to indicate the cell number

o select a program
umber, click on the
ghlighted area

se the left-right arrows to
elect the program number

Algorithm | Program

The general algorithm of the program can look like this:

1. Send an 'Init' message to configure the motors
2. Send a 'Left' message to test the turn

1. Waiting 'Left' message
2. Make a left turn

1. Waiting 'Init' message
2. Configure all motors

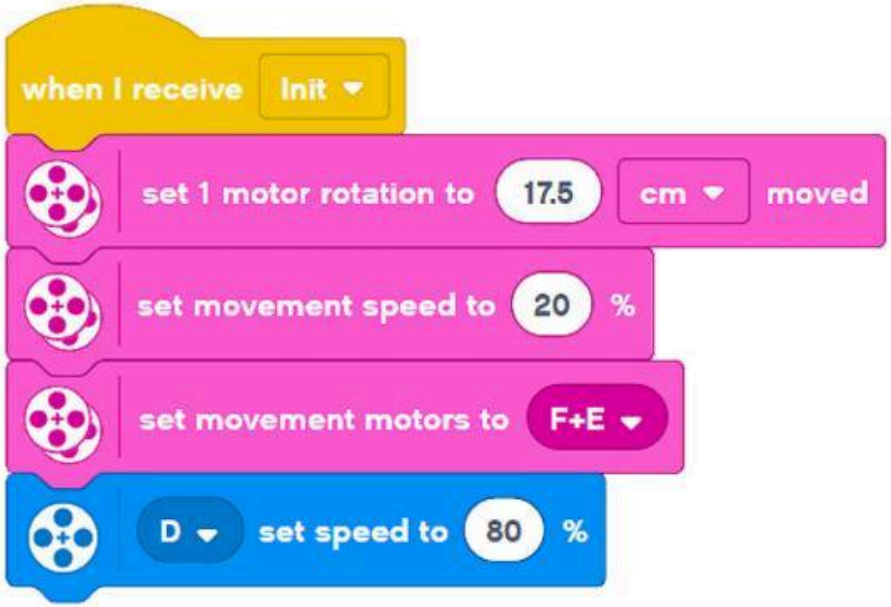

1. Waiting 'Right' message
2. Make a right turn

robotics@littlealphas.com.au

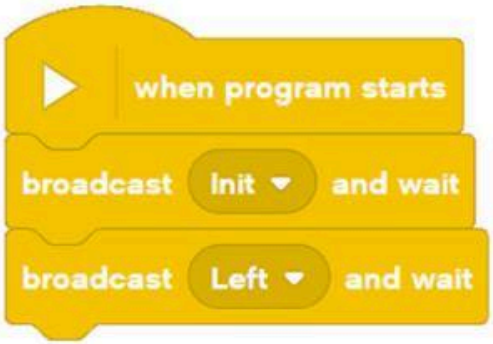

For programs that perform turns and adjust the servo motors of the robot, use sending messages while waiting for the execution to complete:

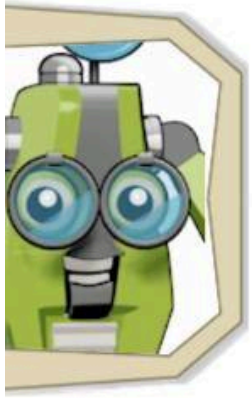

robotics@littlealphas.com

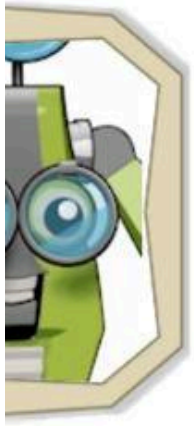

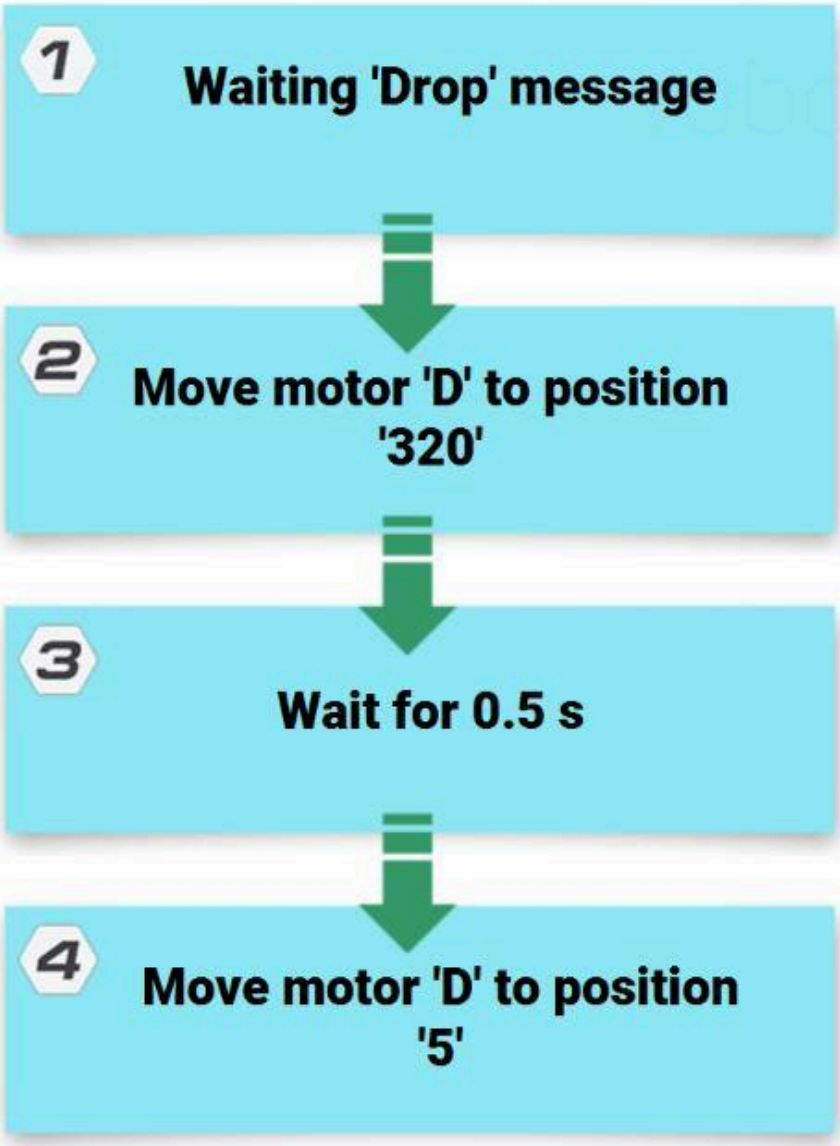

Enter the message that will be used to indicate that the robot moves forward one cell:

botics@littlealphas.com.au

The algorithm for executing such a command is very simple:

Create a message that will be sent for the robot to place the tag. Pay attention to the waiting block. What do you think is its role?
